

Technology Stack

Date	04 July 2026
Team ID	
Project Name	Smart Lender – AI Based Loan Eligibility Prediction System
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

S. No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	HTML, CSS, Bootstrap	Create a responsive and user-friendly interface for entering loan applicant details and loan eligibility results

a2	Backend / Server-Side	Python, Flask	Handles user requests , processes input data , loads the ML model , return loan eligibility prediction results.
3	Database / Data Storage	CSV Dataset	Store loan applicant data and prediction results for processing and model training.
4	Cloud / Hosting / Deployment	Local Host (Flask)/Render(optional)	Runs and displays the application for users to access through a web browsers
5	Version Control & CI/CD	Git & GitHub	Manages source code, task changes ,and manages source code, version control,and collaboration.
